

Remote Eyes® StoreAudit™

Customizable business operations performance monitoring service

For less than the cost of a “mystery shopper”, you can know with certainty - every day - that your locations are meeting your performance standards

Unlike mystery shopper solutions, the RemoteEyes StoreAudit performance monitoring service uses your business' security camera system to report the details of employee, customer, and supplier activities that can damage both customer experience and your store's profitability. Highly efficient, StoreAudit performance monitoring is able to measure key indicators every day for the same price you would pay for just one mystery shop site visit.

StoreAudit can be ordered as needed or set up as a daily or weekly recurring service.

Who Can Use This:

- > Restaurants
- > Bars, Casinos, and Nightclubs
- > Retail stores
- > Car dealerships
- > Hotels
- > Hospital reception and waiting areas
- > Continuing Care Retirement Communities
- > Long-term Care Facilities
- > Multi-tenant Residential Communities

Product Features

- > Pricing comparable to less capable mystery/secret shopper solutions
- > Precisely measure employee performance at every point in your operation
- > Confirm that critical procedures are performed as instructed
- > Focus training on areas where management standards are not being met
- > Link employee bonuses and benefits to specific performance objectives
- > Track high value inventory handling from vendor delivery to sale
- > Lower worker's compensation and liability insurance costs by improving workplace safety practices
- > Monitor key customer satisfaction procedures
- > Increase average ticket revenue by targeting employee training and measuring performance

Performance Reports Emailed to Management – Every Day

The metrics created by the StoreAudit service are emailed daily to management in the form of charts and graphs. The layout is designed to paint a clear picture so that management can spot problem areas and take immediate corrective action. Fully customizable, clients choose what they want to see and how they want to see it. Daily tracking reveals positive and negative trends for a particular location or across all locations. For an even closer look, all supporting data is also available in spreadsheet format for further analysis.

Performance monitoring reports are easily viewed on a tablet, smartphone or PC and quickly reveal each day's results and trend.
