JPL Management Deploys Remote Eyes® Drive-Thru Expediter™
Software Boosts Dual Lane Drive-Thru Order Volume and Accuracy

Hanover, Maryland, March 18, 2011 - Odyssey Technologies, Inc., manufacturer of Remote Eyes® Drive-Thru Expediter™ ("DTE"), is pleased to announce that JPL Management Inc., a Kentucky operator of 10 Burger King restaurants, has successfully deployed DTE to streamline its dual lane drive-thru configuration. The DTE system provides drive-thru staff with a wall-mounted touch screen display showing each vehicle in the drive-thru queue with order number and order detail readily available. Drive-thru staff uses DTE to correctly associate a given order number with the customer vehicle 100% of the time.

According to Andrew Schory, Managing Owner of JPL Management, "Dual lane drive-thru is a complex operation to manage effectively because of the order accuracy problem. DTE solves that problem quite handily. With it, we can process drive-thru orders faster than ever. Without it, we are flying blind and trending toward chaos. In addition, DTE is extremely simple and easy to use, so new employees can pick up on it with very little training. Also, Odyssey's support during the rollout was phenomenal. Rarely have we seen a technology vendor be as responsive to our needs as Odyssey has been."

John Webster, CEO of Odyssey Technologies, Inc. says, "We could not be more pleased with the results JPL Management has achieved through their DTE deployment. DTE is a break-through technology that

we see as quickly becoming indispensable in both dual lane and traditional single lane drive-thru operations. We applaud JPL for their success as an early adopter of this new approach to drive-thru management."

About Odyssey Technologies, Inc.
Odyssey Technologies, Inc. was founded in 1997 and is an early pioneer in digital video. With over 9,000 video surveillance systems installed worldwide, Odyssey differentiates itself by providing equipment, software, and services for centralizing and automating multi-site operations in Retail, Hospitality, Financial Services, and Property Management. Remote Eyes systems feature superior video compression, multi-site remote video management, and integration with point-of-sale, access control and networked transaction systems.
