**Odyssey Technologies, Inc. Launches H.264 Surveillance
Remote Eyes[®] delivers unprecedented image quality and frame rates**

Laurel, Maryland, March 4, 2009 - Odyssey Technologies, Inc., manufacturer of Remote Eyes[®] digital video management systems, has launched a new generation of PC-based surveillance equipment featuring high resolution H.264 compression with real-time recording frame rates.

“The incorporation of H.264 technology into our Remote Eyes line represents a huge step forward for our customers in terms of image quality, resolution, and frame rates,” stated Odyssey CEO, John Webster. “Many competitive products are still using dated and inefficient compression techniques such as Wavelet and MJPEG or are just now migrating to MPEG-4. By incorporating H.264, Remote Eyes is leapfrogging the industry and offering our customers the best video surveillance technology available on the market today.”

The new Remote Eyes line became commercially available on February 2, 2009 and offers users the ability to record all cameras in full 4CIF resolution at up to 30 frames per second per camera. Unlike most products in the industry, there is no need for users to budget or allocate recording frame rates across the cameras. Advanced features that Remote Eyes excels in, such as POS and access control integration, continue to be available with the new product line.

About Odyssey Technologies, Inc.

Odyssey Technologies, Inc. was founded in 1997 and is an early pioneer in digital video. With over 9,000 video surveillance systems installed worldwide, Odyssey differentiates itself by providing equipment, software, and services for centralizing and automating multi-site operations in Retail, Hospitality, Financial Services, and Property Management. Remote Eyes systems feature superior video compression, multi-site remote video management, and integration with point-of-sale, access control and networked transaction systems.
